

## ***Installation Instructions for the USB 4-Port Switch:***

Using the included USB cable, connect the square "B" end of the cable into an available "B" port on the back of the Switch. Use the other end to plug into the rectangular "A" port on your computer. Repeat this step for up to three additional computers. Now plug your USB device into the Switch's "A" port. Use the Port Selector Button to switch between computers.

## ***Installation Instructions for the USB 4-Port Switch with an USB BusStation™:***

Connect the square "B" connector of the included USB cable into the root port of the BusStation. Connect the rectangular "A" connector of the USB cable into the USB 4-Port Switch. Now, you can begin connecting your USB devices to the BusStation, such as keyboards and mice. Finally, connect your computers to the USB 4-Port Switch as described in the instructions above. All connected computers can now share all connected USB devices.

**Note:** The USB 4-Port Switch will not fit in the BusStation. Forcing the Switch into the BusStation module bay will result in damaging the BusStation. You may, however, add your USB 4-Port Switch to the top module of the BusStation by sliding the Switch into the grooves.
