

Benefits:

- Installs easily, with Plug-and-Play capability
- Transfers data up to 100x faster than traditional Ethernet
- Builds upon the widely deployed Ethernet standard
- Offers a cost-effective upgrade from 10/100 Ethernet

NOTE: The stated transmission rate—100Mbps—is the physical data rate. Actual data throughput will be lower.

What is Gigabit Ethernet?

Gigabit Ethernet builds upon the widely deployed Ethernet standard by transferring data at up to 1000Mbps. Backward-compatible with existing 10/100 Ethernet networks, it offers an ideal solution for home and small-office users who need fast wired performance for sharing large data files, network printers, video files, and multiplayer gaming.

Here's what you need

The Belkin 5-Port Gigabit Switch provides the central connection point for your Gigabit Ethernet network. Position your Switch within cable length of your computers and servers and connect your Belkin Category 5 cables.

For Desktop Computers
A Desktop PCI Card connects your Switch to your network. Important: You must have a router to establish a network.
