

BELKIN Desktop PCI Card

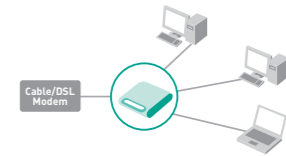

Connect your desktop computer to a wired network

Here's what it does

The **Desktop PCI Card** connects your desktop computer to your network or to your cable or DSL modem. With a Belkin Router as the central connection point of your network, your computers can share your high-speed Internet connection as well as files, printers, and hard drives.

Here's what you need

The Central Connection Point

The **Wired Router** is the central connection point of your network. Position your Belkin Router near your computers to allow for shorter cable runs.

For Desktop Computers

A **Desktop PCI Card** connects your desktop computer to your network. Important: You must have a router to establish a network.

NOTE: If you currently have a computer that is directly connected to the modem, you will not need an additional network card/adaptor for that computer.

What is 10/100 Ethernet?

This networking technology transfers data at speeds of up to 100Mbps. It offers an ideal solution for home or small-business users who need wired performance for sharing large data files, network printers, video files, and multiplayer gaming.

NOTE: The stated transmission rate—100Mbps—is the physical data rate. Actual data throughput will be lower.

Benefits:

- Installs easily, with Plug-and-Play capability
- Lets you share an Internet connection at wired speed
- Offers an inexpensive networking solution

BELKIN Desktop PCI Card

Package Includes

Desktop PCI Card
Quick Installation Guide
Installation Software CD

System Requirements

PC with available PCI expansion slot
PC running Windows® 98SE, Me, 2000, XP, or 2003
Mac OS® X v10.2.x and above

Specifications

Interface
Female RJ45 Jack
Data Bus
PCI 2.2
Network Standards
IEEE 802.3, 802.3U, Auto-Negotiation
Full Duplex
10Mbps and 100Mbps
LED Indicators
Link/Activity and 100Base-Tx
