Share your connection
and start making money...
Here's how...

What is Tomizone?

The Tomizone Hotspot feature on your Belkin Wireless Modem lets you offer affordable, secure Wi-Fi Hotspot access to paying customers or free to friends and family, using your broadband connection with this Modem / Router!

You choose whether to give users free access or charge them for use, we do the billing on your behalf and you keep half of the money spent at your Hotspot.

Setting up your Tomizone Wi-Fi Hotspot is free and gives you two secure wireless networks at your place! Why not share your connection and start making money? Refer to the Belkin Manual or the Set Up Wizard to get going.

Security is key

Our Tomizone software keeps Wi-Fi users away from your internal network. That means you are safe from Internet threats and people who want to harm you.

The Tomizone firewall also keeps Wi-Fi users safe because owners and users can't obtain secure data when they turn on or login to a Tomizone Hotspot.

This Tomizone-enabled Wi-Fi Router offers Dual identifiers (SSIDs) giving you two networks in one box – a private secure network for your use and a second open public network for the Tomizone Hotspot that people pay to use.

Free or a fee – you choose!

With Tomizone, you choose who has access to your Internet free of charge. Other users pay a modest fee and you split the proceeds with Tomizone, 50-50, no recurring charges or hidden costs.

How the Money Works

Here's the deal: for every dollar spent at your place, we split the money 50-50 and there are no ongoing charges from Tomizone. We take care of billing and authentication making Tomizone a true plug-and-play Wi-Fi solution.

For example, if a Hotspot customer spends \$4 at your hotspot, you keep \$2*. This money builds in your Tomizone Hotspot account for you to withdraw. It's as simple as that.

* Excludes transaction charges if any.

Why not share your connection and start making money?

AUSTRALIAN HOTSPOT OWNERS : PLEASE NOTE:

Setting up a Tomizone Hotspot complies with current legislation in Australia, provided the hotspot is primarily for users on the premises; if paying users outside of the premises log onto the hotspot through "signal leakage" it is still permitted provided you (as the hotspot owner) do not adjust the standard power of the equipment, or actively promote your hotspot to off-site users.

The Telecommunications Act 1997 in Australia (the Act) defines a range of situations where providing telecommunication carriage services to the public requires the network unit owner to hold a carrier licence under section 42 of the Act. However subsequent legislation titled the Determination Under subsection 51(1) (No. 1 of 2002) of the Act, exempts wireless network unit owners from the requirement to hold a carrier licence, provided the network unit is only used to supply carriage services to users in a distinct place, that is a particular premises. If you require any further information, please go to: http://www.acma.gov.au/WEB/STANDARD/pc=PC_300156
