

Wireless G USB Adapter

The Wireless G USB Adapter connects your desktop or notebook computer to your wireless network.

Belkin Wireless G, or 802.11g, refers to the networking standard that transfers data at up to 54 Mbps using the 2.4 Ghz band. It is ideal for homes and offices that require a flexible solution to download music from the Internet or share photos and other files without wired connections between computers. Belkin Wireless G is ideal for Web-surfing and email.

The Wireless G USB Adapter connects your desktop or notebook computer to your wireless network. With a wireless router as the central connection point for your network, your computers can share files, printers and hard drives quickly and reliably and - via a DSL Modem - broadband access to the Internet. Desktop users can now join the network with the ease of a USB plug-in, without opening their PC cases; laptop users can enjoy the benefits of staying mobile-while connected to the Internet.

Benefits
