

Wireless G Universal Range Extender

The Wireless G Range Extender relays the signals of your wireless network and extends its range.

Belkin Wireless G, or 802.11g, refers to the networking standard that transfers data at up to 54 Mbps using the 2.4 Ghz band. It is ideal for homes and offices that require a flexible solution to download music from the Internet or share photos and other files without wired connections between computers. Belkin Wireless G is ideal for Web-surfing and email.

The Wireless G Universal Range Extender relays the signals of your wireless network and extends its range. With a wireless router as the central connection point, your network now reaches further, enabling your computers to share files, printers and hard drives quickly and reliably and - via a DSL Modem - broadband access to the Internet. You can also use the Range Extender to add wireless capabilities to your wired network.
