

# BELKIN.

## Omniview Soho Series 2-Port KVM Switch, USB In & Out

The new OmniView SOHO Series USB KVM Switch with Audio from Belkin allows you to control two USB computers from one USB console. The innovative design provides built-in cable management and saves space while adding a whole new sculpted look to your desktop. Once the shroud slides into place, the cables conveniently flow through the back opening.

The Belkin SOHO Series USB KVM Switch offers advanced engineering, such as audio and microphone support, that enables you to switch between speakers and microphones without having to reconnect. To ensure compatibility with the latest computers and devices, a flash-upgrade feature allows users to update firmware when necessary. Used with coaxial VGA cabling, the Switch supports video resolutions of up to 2048x1536@85Hz through a 400MHz video bandwidth, delivering the highest resolution possible without compromising display quality.

### Benefits

- Control two USB computers from one USB keyboard, mouse, and monitor
- Audio and microphone switching support
- Control through USB hot key switching and direct-access port selectors
- Support for USB computers and console
- Support for video resolutions
- Built-in cable management
