

Wireless G+ Desktop Card - F5D7001uk

Wireless G+ builds upon the widely deployed 802.11g standard by transferring data up to 125 Mbps using the 2.4Ghz band. This means you will see overall speed improvements in "mixed mode" networking environments with other 802.11g devices. Wireless G+ is ideal for homes and offices looking for a performance boost when downloading music from the Internet, sharing photos or gaming online. Belkin Wireless G+ is ideal for streaming music, Web-surfing and email.

The Wireless G+ Desktop Card connects your desktop computer to your wireless network. With a wireless router as the central connection point for your network, your computers can share files, printers, hard drives and - via ADSL modem - broadband access to Internet.

Product Features:

- Adds enhanced wireless networking capabilities to any desktop computer
- Compatible with 802.11b and 802.11g devices
- Fits any standard 32-bit PCI expansion slot
