

48-Port Angled CAT 5e Patch Panel - F4P338-48AB5-AN

What is a patch panel? Think of it as an old fashioned switchboard. A place where network connections are made and often rearranged, guiding the information to the correct destination, each and every time. And since you don't want to change your patch panel every time you upgrade your network, we've built this one to meet the new enhanced Category 5e requirements. This 48 port CAT 5e patch panel is 19 inch rack mountable and supports both 568A and 568B installations. Compatible with both 110 and Krone punch down tools, with angled design that increases bend radius.

Características del producto:

- Angled design puts less strain on patch cables.
- Category 5e performance rated
- Supports Gigabit Ethernet connections.
- 110 style terminations is the most popular and familiar termination.
- This product is guaranteed for life!
- Supports 568A and 568B installation. Some patch panels only support one installation, our dual support guarantees compatibility with all networks.
