

SMB CAT5 Server Interface Module (SIM) Legacy SUN - F1DP101AeaAL

For use with the SMB CAT5 KVM Switches with CAT5 Extension, the Server Interface Module allows users to control their servers from a distance of up to 100 feet. It offers a perfect solution for secure systems, large server rooms and farms, and test benches where the computer may be inaccessible to the user.

A Server Interface Module is required with each server connected. Using the recommended CAT5 or CAT6 cables significantly reduces the amount of cable clutter behind the rack.

Product Features:

- Enables servers to be situated 100 feet from the KVM Switch using CAT5 expansion technology
- Provides a clean, clutter-free, cable server connection through its compact design
- Provides RJ45 connection and streams out into Legacy SUN keyboard, mouse, and VGA connectors for servers
