

N1 Wireless Router

N1 Wireless Networking Based on the 802.11n draft, N1 Wireless enables multiple receivers and transmitters to send and receive data through the air, using Intelligent MIMO (Multiple Input Multiple Output) spatial multiplexing techniques. The smart-antenna technology builds upon the widely deployed 802.11g standard by greatly increasing speed, range and faster speeds up to 300Mbps.*

Providing greater range and faster speeds, N1 Wireless offers a quick and efficient way for people to distribute video, music, photos, and files among the networked computers in their home. The built-in Network Status Display shows the status of your network. The icons represent each component of your network and show you whether or not each device is working properly.

*NOTE: The standard transmission rate-150Mbps and 300Mbps - is the physical data rate. Actual data throughput will be lower.

Benefits

- Handle multiple VoIP phone calls
- Shop online and surf the web
- Transfer photos and home videos
- Play online games
- Listen to digital music
- Stream HD Video
- Email and chat

System Requirements

- Broadband Internet connection with RJ45 (Ethernet connection)
