

OmniView Secure KVM 2-Port

Designed specifically for secure military and government installations, the OmniView Secure KVM Switch lets you control multiple USB computers from a single USB console. This product ensures the integrity of your data by safely switching among computers running on different security levels. The OmniView Secure KVM Switch is NIAP Common Criteria validated to EAL 4.*

Available in 2-, 4-, and 8-port models, the Switch features a dedicated processor per computer port. This keeps each computer separate and secure at all times, and prevents data transfer among them. The device has no memory buffer or data-storage capability, making it impossible for your keystrokes and other data to unintentionally transfer as you switch between computers.

Benefits

- Keeps computers running on different security levels separated; protects secure data and prevents data transfer among computers
- Prevents unintentional transfer of keystrokes or other data when switching between computers
- Prevents data from being stored on KVM Switch
- Prevents tampering with KVM logic
- Prevents tampering with components
- Indicates that KVM Switch has been compromised; assures security when intact

Package Includes

- OmniView Secure KVM Switch
- 5V DC, 2.6A Power Adapter
- User Manual
- Quick Installation Guide
