

24-Port Angled CAT 5e Patch Panel - F4P338-24AB5-AN

What is a patch panel? Think of it as an old fashioned switchboard. A place where network connections are made and often rearranged, guiding the information to the correct destination, each and every time. And since you don't want to change your patch panel every time you upgrade your network, we've built this one to meet the new Category 5e requirements. This patch panel mounts on a 19-inch rack and supports both 568A and 568B installations. Compatible with both 110 and Krone punch down tools, with angled design that increases bend radius.

Product Features:

- Category 5e performance rated.
- Angled modules puts less strain on patch cable.
- Accepts either 110 or Krone punchdown tools.
- Supports 568A and 568B installations. Some patch panels only support one installation, our dual support guarantees compatibility with all networks.
- This product is guaranteed for life!
