EN | Why ExpressCard?

ExpressCard, the new standard designed to replace Cardbus, effectively quadruples the amount of available computing bandwidth. This results in faster music downloads, smoother video streaming, and lightning-fast access to mass-storage devices, without your computer freezing, crashing or slowing down to a trifle. Express cards do not fit standard PCMCIA slots.

The Belkin SATA II ExpressCard offers the perfect solution for users who want to add a Serial ATA II port to their notebook computers.

NL | Waarom ExpressCard?

ExpressCard, de nieuwe standaard die Cardbus zal vervangen, verviervoudigt op efficiënte wijze de hoeveelheid beschikbare computerbandbreedte. Hierdoor kunt u sneller muziek downloaden, verloopt video-streaming veel vliekelozer en is ultrasnelle toegang tot massaopslagapparaten mogelijk. Express-kaarten passen niet in standaard PCMCIA-sleuven.

De SATA II ExpressCard van Belkin is ideaal voor gebruikers die hun notebook willen uitbreiden met een seriële ATA II-poort.

FR | Pourquoi ExpressCard ?

ExpressCard, cette nouvelle norme qui remplacera la norme CardBus, permet d'augmenter la bande passante disponible, allant du simple au quadruple. Ceci permet de télécharger des morceaux de musique plus rapidement, de visionner des fichiers vidéo sans interruptions et d'accéder à des périphériques de stockage de masse à la vitesse de l'éclair, sans gel ni plantages ni ordinateur qui roule à la vitesse d'une tortue. Les cartes ExpressCard ne conviennent pas aux emplacements PCMCIA standard.

La Carte ExpressCard SATA II Belkin représente la solution idéale pour les utilisateurs désirant ajouter un port Serial ATA II à leur ordinateur portable.

ES | ¿Por qué una tarjeta ExpressCard?

ExpressCard, el nuevo estándar diseñado para sustituir a la tarjeta Cardbus, cuadruplica de forma efectiva el ancho de banda disponible. Así se consigue descargar música más rápidamente, mayor calidad de transmisión de archivos de vídeo, y acceso ultrarrápido a dispositivos de almacenamiento masivos, sin que su ordenador se quede inactivo, aparezcan errores o funcione muy lentamente. Las tarjetas Express no encajan en las ranuras del estándar PCMCIA.

La tarjeta ExpressCard SATA II de Belkin ofrece la solución perfecta para usuarios que desean añadir un puerto en serie ATA II a sus ordenadores portátiles.

DE | Warum ExpressCard?

ExpressCard ersetzt als neuer Standard die alte Cardbus-Technik (32 Bit-Datenbus). Die zur Verfügung stehende Bandbreite wird damit vervierfacht. Schnellere Musik-Downloads, stabiles Video-Streaming und ein blitzschneller Zugriff auf Massenspeicher sind ebenso die Vorteile wie die erhöhte Stabilität, weniger Abstürze und Verzögerungen. Express-Karten passen nicht in PCMCIA-Standardsteckplätze.

Die SATA II-ExpressCard von Belkin eignet sich besonders für Anwender, die einen seriellen ATA II-Port an ihr Notebook anschließen möchten.

IT | Perché ExpressCard?

ExpressCard, il nuovo standard che sostituirà Cardbus, raggiunge di fatti una velocità di calcolo quattro volte più rapida di quella attualmente disponibile. Questo consente di scaricare musica a una velocità maggiore, di godere di una visualizzazione più nitida del video in streaming e di poter accedere a velocità altissime a unità di memoria di massa, senza che il computer si blocchi, si danneggi o rallenti le operazioni. Le schede Express non sono compatibili con gli slot PCMCIA standard.

La scheda Express SATA II rappresenta la soluzione ideale per chiunque desideri aggiungere al proprio notebook una porta seriale ATA II.
