SMB KVM-Over-IP**

(Pre-Release) Firmware Version 3.0.1 (Build 33)

Please be advised that this Firmware is a 'Pre-Release' Version of the Firmware, that has not yet passed full testing.

Resolved Issues:

- After clicking "Save & Restart" there will be no mouse during the next Remote Session login.
- Unwanted keystrokes sent to the host machine when a user logs in to take control.
- The setting 'Sync Caps/Scroll/Num Lock State' needs to be documented. The image for the Switch Configuration setup page needs updating to show this new option.
- The setting "Sync Caps/Scroll/Num Lock State" does not work.
- Logging out of a remote session while focused on a Windows NT 4 server causes erratic mouse.
- Video issues with LCD monitors and Sun Computers.
- The Timeout feature set through the OSD does not work correctly most of the time.
- Video is shaky during remote session.
- Safe Mode Interface is unfinished.
- The KVM Ethernet interface has difficulty negotiating Full/Half duplex
- The local mouse stops functioning after a few remote sessions
- Support for Linux Hotkeys (ALT-B-SYSRQ)
- Default OS Mouse Config on the remote changed from Windows 2000 to Windows XP/2003
