Belkin previews new Thunderbolt Express Dock at 2012 International CES

(Rushden, UK). – **9 January, 2012** – Belkin has today unveiled details about its new Thunderbolt Express Dock which will be on display at Belkin’s stand at this year’s International CES.

The Belkin Thunderbolt Express Dock enables Macbook and Ultrabook users to instantly access multiple desktop peripherals with one cable. The dock allows users to simultaneously connect to multiple USB devices, watch movies in Full HD 1080p, transfer volumes of data in seconds, and view online content at gigabit Ethernet speeds. The dock provides an easy transition from a desktop workstation to unrestricted mobile productivity.

“People purchase the MacBook Air and Ultrabook for ultimate portability, but constantly plugging-in and unplugging numerous cable-connected peripherals is an annoying and time consuming ordeal,” said Martin Avilla, general manager of Belkin’s Core Business Unit. “The Thunderbolt Express Dock provides a much-needed solution that creates a cleaner, faster, more productive workspace and reliable connectivity to desktop devices and the Internet.”

Belkin Thunderbolt Express Dock

- Quickly connects a desktop workstation and instantly accesses multiple devices with a single cable
- Adds reliable, gigabit Ethernet connectivity to your laptop
- Includes three USB 2.0 ports, one Firewire 800 port, one HDMI port, one 3.5mm Audio port, one gigabit Ethernet port and two Thunderbolt ports (one upstream and one downstream) for daisy-chaining to another Thunderbolt compatible device.
- Utilises Thunderbolt Technology for data transfer rates of up to 10Gbps bi-directionally

Availability

The Belkin Thunderbolt Express Dock will be available in autumn 2012 at major retailers across Europe. Pricing information will be available closer to launch.
