LEAD WITH LEED CERTIFICATION

Belkin's Playa Vista headquarters are so energy efficient that the complex has been awarded **LEED** (Leadership in Energy & Environment Design) gold certification. What else is Belkin doing to achieve this?

518
solar panels on the building rooftop

14
EV car charging stations

50
energy efficient motion sensor lights

COMPOSTABLE
cutlery and to-go containers in the Belkin café

HAPPY COMMUTES

Belkin helps employees cut down on their commuting carbon footprint by providing van pools and connecting commuters for carpooling opportunities. There's even a number of incentives to promote going green.

- Rideshare subsidies and preferential parking
- Cash incentives for using public transportation
- Free EV chargers onsite for employees (Playa Vista HQ)
- Cash incentives to participate in carpooling, telecommuting, and off-schedules to reduce congestion during peak commuting hours

THINK GLOBALLY

Global initiatives have helped Belkin reduce our carbon footprint on a much larger scale.

37%
reduction in worldwide electricity consumption

5%
less waste to landfills

5%
less water consumption

- In the United States and Europe Belkin subscribes to a regulatory mandate called **WEEE** to recycle electronic waste
- Using packaging with recyclable **PET trays** when possible allows consumers to recycle their Belkin packaging
- Registered as a producer with the state's environmental agencies in many European countries, Belkin reports how much paper and plastic packaging we import and pay recycling schemes to offset that paper and plastic (UK: <http://npwd.environment-agency.gov.uk>)
